# PMI PBA® Certification Preparation Course

ALL-IN-ONE: EXAMINATION INCLUDED IN PRICE

5 days (35 hours)

## Presentation

Our PMI-PBA® training course will prepare you to sit the exam organized by Project Management Institute. You'll be able to demonstrate your BI skills in a context of co-creation with stakeholders and project management.

The test consists of a long questionnaire with 200 multiple-choice questions. You will be assessed in 5 different areas:

- Needs assessment
- Planning
- Analysis
- Traceability and monitoring
- Evaluation

Acquiring these skills will prove your expertise as a project manager in business analysis, but also in [requirements management](#). You'll understand the scope and importance of the business analyst within a corporate project.

Our PBA® training course will enable you to review all the chapters of the exam. So you'll be ready to meet the expectations of the business data analysis [market](#).

## Objectives

- Understanding the role of the Business Analyst in project management
- Prove your business analysis skills
- Preparing for the PMI PBA® exam

## Target audience

- Business Analyst
- Product managers
- Project managers
- Testers
- QA

## Prerequisites

- 35 hours of training in business analysis
- Minimum experience in business analysis :
  - 60 months over the last 8 years if you have a diploma between baccalauréat and licence level
  - 36 months over the last 8 years if you have a higher level diploma, or equal to bac+3
  - 24 months without any other profession if you have a degree of at least bac+3 from a GAC-accredited program.

Note: Ambient IT is not the owner of PBA®, this certification belongs to Project Management Institute, Inc.

- Monitor the progress of requirements
- Update requirement statuses
- Communicating the status of requirements
- Managing requirement changes

## Evaluation

- Validate test results
- Identify and communicate discrepancies
- Obtaining stakeholder approval
- Evaluating the deployed solution

## Strategies for exam success

## Companies concerned

This training course is aimed at both individuals and companies, large or small, wishing to train their teams in a new advanced computer technology, or to acquire specific business knowledge or modern methods.

## Positioning on entry to training

Positioning at the start of training complies with Qualiopi quality criteria. As soon as registration is finalized, the learner receives a self-assessment questionnaire which enables us to assess his or her estimated level of proficiency in different types of technology, as well as his or her expectations and personal objectives for the training to come, within the limits imposed by the selected format. This questionnaire also enables us to anticipate any connection or security difficulties within the company (intra-company or virtual classroom) which could be problematic for the follow-up and smooth running of the training session.

## Teaching methods

Practical course: 60% Practical, 40% Theory. Training material distributed in digital format to all participants.

## Organization

The course alternates theoretical input from the trainer, supported by examples, with brainstorming sessions and group work.

## Validation

At the end of the session, a multiple-choice questionnaire verifies the correct acquisition of skills.

## Sanction

A certificate will be issued to each trainee who completes the course.
